

Think: Telemedicine

There are more than **2,000** good reasons why **telemedicine** is playing such a key role in improving the **health** and **well-being** of your residents.

That is how many calls our digital care hub of nurses received last month from **you and other care homes** across the district – and the **good news** is that this number is **increasing** all the time.

Thanks to this teamwork, the number of calls to **GPs, the ambulance service and district nurses** have reduced significantly. So too have visits to **accident and emergency departments**.

The advice from our team of senior nurses working in the hub 24/7 is enabling more and more of your residents to remain in their home. This is **preferred** by them and is **clinically more appropriate**.
